

[Starting page](#)

When started, an app should display an alphabetical index. Index should contain only the first letters of the words which are presented in the dictionary. When loading an app for the first time, list of all words starting from the first letter in the alphabetical index should be displayed. The list should be divided into 4 columns.

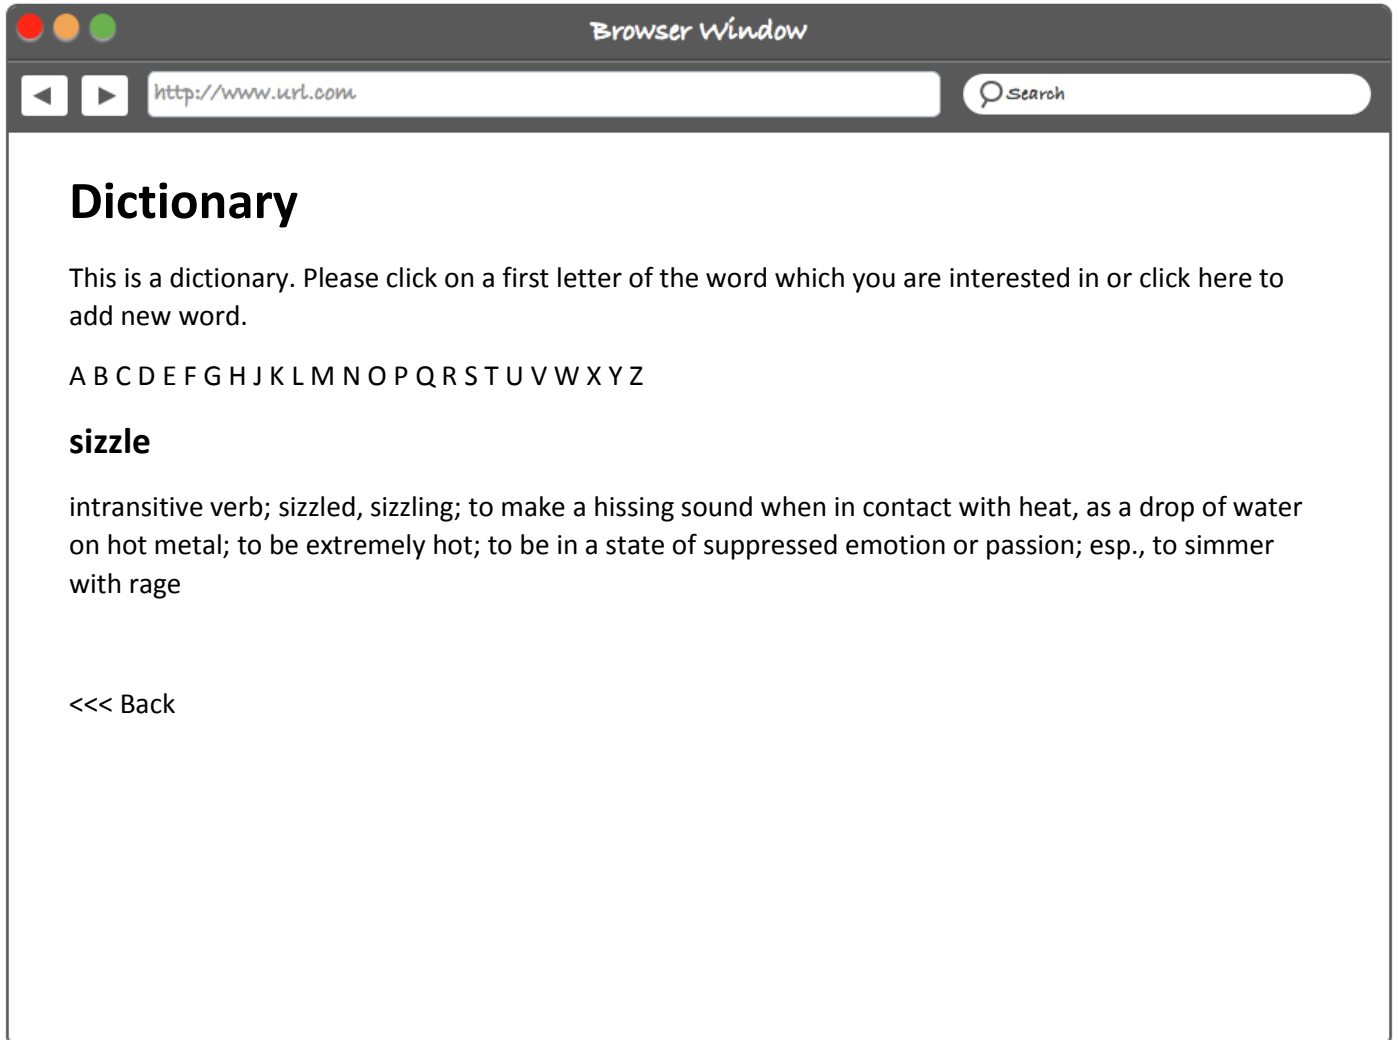

Selecting a letter

When user clicks on a letter in the alphabetical index, list of all words starting from that letter should be displayed. The list should be divided into 4 columns.

Selecting a word

When user clicks on a word in the list, a definition of this word should be displayed. After this, clicking "Back" link should redirect user back to the list of words.

Adding a word

Users can add their own words to the dictionary. By clicking on a corresponding link, a form containing two input text boxes should appear. User can enter word and its definition into these boxes and click “Add” button. This should result in adding the word to the dictionary and displaying a list of all the words starting from the same letter with the added word.
